

First Nations Home EnergySave

Indigenous Home Energy Management Training Opportunity

If you've ever wondered how a heat pump works and if it's the right technology in your community;

Or, you manage a number of homes and want strategies to make them more energy efficient, healthier, and control costs.

Or, you're interested in accessing utility and provincial government energy efficiency incentives, but aren't sure where to start.

This training series is for you!

Fraser Basin Council is offering free home energy management training webinars as part of its First Nations Home EnergySave initiative. The calendar is finalized and our first workshop kicks off **September 9th from 11 to 12:30 PDT**. The introductory webinar **Overview of Building Systems** will explore how major building systems (envelope, heating, ventilation, cooling, etc.) interact and affect overall performance of a home. We'll discuss home energy use profiles and look at how energy conservation can help you to improve health, comfort, and manage costs.

[REGISTER NOW](#)

After registering, you will receive a confirmation email containing information about joining the meeting.

Please note space in this webinar is limited. Priority will be given to participants in British Columbia working in housing management in Indigenous communities. A podcast of each webinar will be published and available for download through the First Nations Home EnergySave web site.

This is the first in a series of 12 webinars over the next 6 months organized into 3 program streams:

Technical	Energy Management	Community
<p>For those responsible for managing renovations and maintenance on homes, this 6-webinar series will review different building systems, how they interact, current and emerging technologies and what you need to know to build, renovate, or repair with energy efficiency in mind.</p>	<p>For those responsible for housing planning and budgeting, this series of 4 webinars looks at practical strategies for managing your housing portfolio with energy in mind.</p>	<p>This limited series aims to support local champions and those working directly with residents with tips and tools to help your community adopt energy efficient technologies and actions in their homes.</p>

Each webinar is 1.5 hours and will be limited to 20 participants to allow opportunity for questions and discussion. We will also feature recommended programs and incentives available to you.
